                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Result
No.
```

```
This sequence represents the Arabidopsis thaliana ATH1 homeobox gene. The invention relates to a plant gene construct comprising a complete or partial DNA sequence coding for an ATH1 gene product under the control of a promoter functional in plants. The construct can be used to modify (either promote or retard) flowering in plants. The construct can also be used in a method of producing a transgenic plant that lacks the shade avoidance response of a wild type plant

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    5164
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The invention relates to a grass plant, which has been genetically modified to substantially inhibit generative propagation and carry herbicide resistance. The grass is useful for growth and/or propagation of grasses. The grass is used to play at least one sport (e.g. baseball, cricket, football, golf, rugby, soccer or tennis), or used at least in a portion of an athletic field, lawn or park. The grass is fed to animal feege, cattle, goat, horse or sheep) or used as an animal feedstuff. The present sequence represents the coding sequence of pVDH636 vector containing the Arabidopsis AtH1 gene, which was used to inhibit flowering in grasses
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        358

```
genetically modified grass is useful for growing and/or propagating grass in athletic fields (for sports such as baseball, cricket, football, golf, rugby, soccer and tennis), lawns, parks and other types of landscaping. The grass is also useful as an animal feedstuff for cattle, goats, and sheep, due to its increased vegetative growth, improved digestibility blasmid pyth636 but a sanimal feedstuff. This sequence represents plasmid byth636 bu. This plasmid was used as a transformation vector for production of transgenic grasses expressing the Arabidopsis thaliana
                                                                                                                                                                                                                                                                                                                                                                       <u>acccaarggacaacaacaacaacaacacacrrrragrrcrcrggaraargrcargacra</u>

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The invention relates to a grass plant which has been genetically modified to substantially inhibit generative propagation. The genetic modification may result in a heritable change in one or more plant characteristics such as inhibition of flowering (or substantial delay production of tillers, delayed heading and inhibition of the amounts to inhibition), absence of inflorescence, increased developmental switch from vegetative to generative growth. A method of making a grass involves transforming the grass with a nucleic acid which interferes with metabolism of gibberellic acid. A grass can be treated by applying a phytohormone to at least partially relieve or reverse a change in plant characteristic resulting from genetic modification. The
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               New genetically modified grass useful for growing and/or propagating grass in athletic fields (for sports such as baseball, cricket, football, golf, rugby, soccer and tennis), or as animal feedstuff for cattle, goat, horse and sheep.

14-SEP-2000

The present invention relates to novel plant transcription factors from Bucalyptus grandis or Pinus radiata. The present sequence is the coding sequence for one such transcription factor. The transcription factor may be used to produce a plant having modified gene expression such as a manogany species or to mathyptus, pine, acacia, poplar, sweetgum, teak, or manogany species or to madify the activity of a polypeptide in a plant. The transcription factors of the present invention are members from the following families of regulatory proteins: bZIP, bZIP family of G-box homeotic/homeodomain/homeobox/MADS, homeodomain zipper, LIM domain, APP2 and RREBS, zinc finger domains of type 2 Cys2His2, CCAAT box elements and New isolated polynucleotide encoding a plant transcription factor for producing a plant e.g. a woody plant, preferably eucalyptus or pine, having modified gene expression or modified activity of a polypeptide. The present sequence is the coding sequence for one such transcription factor. The transcription factor may be used to produce a plant having modified gene expression such as a manogany species or to marking modified gene expression such as a manogany species or to modify the activity of a polypeptide in a plant. The transcription factors of the present invention are members from the binding families of regulatory proteins: bZIP, bZIP family of G-box homeotic/homeodomain/homeobox/MbDS, homeodomain zipper, LIM domain, APP2 and BREBS, zinc finger domains of type 2 CysZHis2, CCAAT box elements and ô TTCACCCTTACCCGAAAGATTCGGAGAAACATCTTCTAGCTATACGAAGTGGCTTGACAA 1549 95 AGAGAGGACTTCCTGAACGCTCTGTNTCTGTTCGTGCATGGTTGTTTGAGCATTTTC 154 recaccerarceaerrearecaerrasecarararecerarecerasecasecreecerases 215 GAAGTCAGGTATCAAATTGGTTTATAAATGCCAGGGTTAGACTATGGAAGCCCATGGTGG 274 94 New isolated polynucleotide encoding a plant transcription factor for producing a plant e.g. a woody plant, preferably eucalyptus or pine, having modified gene expression or modified activity of a polypeptide. 1370 TCCACCAGCATTGCCTTCTTCAGCAGCTGAAACGAAAGAACCATCAGATTTGGAGACCTC 35 raccacacacaccacarrircaccacriascarricacacacacacacacacacacacac 0 Ouery Match 6.8%; Score 127.4; DB 3; Length 343; Best Local Similarity 67.3%; Pred.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The present invention relates to novel plant transcription factors from Eucalyptus grandis or Pinus radiata. The present sequence is the coding sequence for one such transcription factor. The transcription factor may be used to produce a plant having modified gene expression such as a manogany species or to modify the activity of a polypeptide in a plant. The transcription factors of the present invention are members from the following families of regulatory proteins: bzIP, bzIP family of G-box hinding factors. Dasic healx-loop-helix zipper, homeocionmain/homeobox/MADS, homeodomain zipper, LIM domain, AP2 and BREBS, zinc finger domains of type 2 CysZHiSZ, CCAAT box elements and

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The present invention relates to novel environmental stress-responsive promoters (ADB23163-ADB23252) from Arabidopsis thaliana. The promoters are useful in constructing and breeding stress-resistant plants for applications in agriculture and horticulture. The present sequence was used to illustrate the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          1410 CCATCAGATTTGGAGACCTCAACGAGGTTTGCCTGAGAAATCTGTTTCGGTTCTACGGAA

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             ITGGATGTTCCAAAACTTCCTTCACCCTTACCCGAAAGATTCGGAGAAACATCTTCTAGC 1529
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The invention relates to identifying a stress condition to which a plant cell has been exposed, comprising: (a) contacting nucleic acid arrepresentative of expressed polynucleotides in the plant cell with an array or probes representative of the plant cell genome; and (b) detecting a profile of expressed polynucleotides in the plant cell characteristic of a stress response. The method is useful in the production of transgenic plants, cells and seeds and in producing plants with increased tolerance to ablotic stress. The present sequence is that of an Arabidopsis thaliana stress regulated gene (ABZ12196-ABZ17574) used in methods of the invention. Note: The sequence data for this patent is not represented in the printed specification but is based on sequence information supplied to Derwent by the European Patent Office
Identifying a stress condition to which a plant cell has been exposed producing plants with increased tolerance to these abiotic stresses.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          rrescrictrical acatricarical actrical actrices and actrical actrica
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Gaps

The invention relates to a number of isolated Arabidopsis thaliana CDNA sequences and their encoded proteins which are especially transcription factor related CONA's and proteins. The isolated or recombinant plant transcription factor polynucleotides and polypeptides are useful in producing transgenic plants with commercially valuable properties, i.e. modified or alteration is a plant growth characteristic, e.g. growth rate, germination rate of seeds, vigor of plants and seedlings, or leaf and flower sensecence. Sequence information related to the polynucleotides and polypeptides can also be used in bioinformatic search methods. The transgenic plant is useful for growing a progeny plant from a parent plant. This sequence represents one of the CDNAs of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 New plant transcription factor polynucleotides and polypeptides, useful in producing transgenic plants with commercially valuable properties, such as an alteration in a plant growth characteristic, e.g. growth rate
                                                                                                                                                                                                                                                              ds; transcription factor; transgenic plant; growth rate; senescence; seed germination rate; plant vigor; seedling vigor.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 AT, Heard JE;

The present sequence is the coding sequence for one such transcription factor. The transcription factor may be used to produce a plant having modified gene expression such as a woody plant e.g. a eucalyptus, pine, acacia, poplar, sweetgum, teak, or mahogany species or to modify the activity of a polypeptide in a plant. The transcription factors of the present invention are members from the following families of regulatory proteins: bZIP, bZIP family of G-box homostic/homeodomain/homeobox/MRDS, homeodomain zipper, LIM domain, AP2 and EREBS, zinc finger domains of type 2 Cys2His2, CCAAT box elements and

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Db
                                                                                                                                                                                                                                                                                                                                                     Sequence 13, Application US/10204708
Patent No. 6677731
GENERAL INFORMATION:
PAPLICANT: DIEFENBROCK, Christian
APPLICANT: PIEPENBROCK, Christian
APPLICANT: PIEPENBROCK, Christian
APPLICANT: BERLIN, Kurt
TITLE OF INVENTION: Dy Assessing DNA Methylation
TITLE OF INVENTION: Dy Assessing DNA Methylation
FILE REPERENCE: 5013-1012
CURRENT APPLICATION NUMBER: US/10/204,708
CURRENT PILING DATE: 2003-05-06
PRIOR FILING DATE: 2000-04-06
PRIOR FILING DATE: 2000-04-06
PRIOR APPLICATION NUMBER: DE 10019058.8

-!-TISSUE SPECIFICITY: Expressed at high levels in the lung with lower lower bedeected in the heart and brain.
-!- DEVELOPMENTAL STACE: Expressed at high levels in all stages of embryonic development analyzed (7 days to 17 days).
-!- INDUCTION: Expression is coactivated by retroviral integration in EXH-2 murine myeloid leukemiae as a site of viral integration in 15% of the tunors arising in EXH-2 mice that develop myeloid leukemia as a result of the expression of an ecotropic murine leukemia as a -!- SIMILARITY: Belongs to the TALE/METS homeobox family.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      HisGlyProProLeuHisSerHisGlnTyrProHisThrAlaHisThrAsnAlaMetAla

In hematopoietic tissues, the lymphoid organs express high levels of MEIS2. Also expressed in some regions of the brain, such as the putamen. SIMILARITY: Belongs to the TALE/MEIS homeobox family. SIMILARITY: Contains 1 homeobox domain.
                                                                                                                                                                                                                                                                                                                TISSUE=Erain;
